## ABBREVIATIONS AND SYMBOLS

1. <b>Au</b>	Gold
2. <b>BEE</b>	Black Economic Empowerment Partner
3. <b>Circa</b>	Approximately/during the time-frame
4. <b>DMR</b>	Department of Mineral Resources
5. <b>DRDSA</b>	DRDGold South Africa (BEE partner)
6. <b>ERGO</b>	East Rand Gold Operations
7. <b>FSO</b>	Free State Operations
8. <b>FY</b>	Financial Year
9. <b>g/t</b>	grams per ton
10. <b>JV</b>	Joint venture
11. <b>kt</b>	Kiloton of gold
12. <b>kt/pm</b>	kilotons per month
13. <b>LOM</b>	Life of mine
14. <b>m</b>	meter
15. <b>Moz</b>	million ounces
16. <b>Mt</b>	million tons
17. <b>n/a</b>	information not available
18. <b>pa</b>	per annum
19. <b>&gt;</b>	Larger than
20. <b>&lt;</b>	Smaller than
21. <b>U<sub>3</sub>O<sub>8</sub></b>	Uranium Oxide
22. <b>VRO</b>	Vaal River Operations
23. <b>VR</b>	Vaal River
24. <b>WRO</b>	West Rand Operations
25. <b>WVO</b>	West Wits Operations
26. <b>oz/yr.</b>	Ounces per year

## **THE OCCURRENCE, DISCOVERY AND PRODUCTION OF GOLD (Au) IN SOUTH AFRICA**

By far the most important occurrences of gold in South Africa (SA) are found within conglomerates in the upper division of the Witwatersrand Supergroup and the basal formation of the overlying Ventersdorp Supergroup. The vast majority of current mining operations are concentrated on gold-bearing rocks of these Supergroups. The Witwatersrand rocks were deposited over a time span of some 190 million years, commencing about 2 900 million years ago. Currently, seven gold fields are being exploited within the Witwatersrand Basin. They are preserved in structural depressions and downwards in the Witwatersrand Basin and consist of fans or fan deltas deposited by fluvial systems that accumulated erosional debris from an uplifted north-western edge, before debouching into an inland sea or lake. Relatively smaller gold deposits occur within greenstones of Archaean age (older than 2 500 million years), especially in the Barberton Mountain Land and the Murchison Range. Gold is also found in the Transvaal Supergroup (2 000 to 2 600 million years old), notably in the Black Reef Formation and the Chuniespoort Group. Occurrences are also known in the Cape (300 to 500 million years old) and Karoo (200 to 250 million years old) Supergroups.

The first recorded discovery of gold in South Africa during the modern era occurred on the farm Eersteling, near Polokwane in the Limpopo Province during 1871. This was closely followed by findings in Mpumalanga Province at Pilgrims Rest (1872), Kaapse Hoop (1874) and Barberton (1882). The discovery of gold in conglomerates on the farm Langlaagte on the Witwatersrand in 1886, led to the exploitation of the largest gold deposits the world has known to date. The mining on extensions of these conglomerates, particularly those belonging to the Main Reef zone spread rapidly in the Central Rand, West Rand and East Rand gold fields. Discoveries of even more fabulous reefs were made further afield within the Witwatersrand Basin, resulting in the opening up of the West Wits, Klerksdorp, Free State and Evander gold fields.

In 2014, gold was recovered from 52 operations, with the industry employing approximately 131 591 people. The metal was recovered mainly from mines exploiting reefs in the Witwatersrand Basin, secondary production (scrap) and from Platinum Group Metals (PGM) and uranium base metal mines as a by-product. Scrap-recovery operations, such as Goldplats reclaim gold from mine waste and play an integral part in the gold value chain. After smelting, which takes place on the larger individual mines, bullion bars containing about 85 percent gold, 9 percent silver and 4 to 5 percent base metals, are taken to the Rand Refinery (RR) near Johannesburg and processed to either 99.5 or 99.9 percent to meet specialized demands from certain industries. The RR then sells the refined gold to its customers on behalf of the gold-producing companies. The refiner has as its customer base the major accredited international bullion banks and acts as the sales agent for the gold producers.

The directory aims to provide a comprehensive list and profile of operating gold mines and recovery plants in SA. Mining profiles include location, ownership, production, lifetime of mine (where applicable) and employment data for 2014. For ease of reference, both AngloGold Ashanti and Harmony's regional operations have been separated by individual operations in parenthesis. In some instances, regional production and employment data is stated, as jointly reported by the respective regions to the DMR as well

as stated on annual reports. PGM's mines that produce gold as a by-product can be referred to in the Platinum Group Metal Mines in South Africa (D6).
